

THOMPSON R2-J SCHOOL DISTRICT
HEALTH SERVICES

Permission for Medication

Student _____

School _____ Grade _____

Medication _____ Dosage _____

Frequency (if prn, please include time interval needed between doses) _____

Duration _____ Route _____

Physician's
Signature _____

Physician's Name (*printed*) _____

It is agreed and understood that this medication will be provided by the parent/guardian in the original bottle, labeled with the name of the medication, dosage, route of administration, frequency of use and clearly marked with the student's name. The parent agrees to pick up expired medication or unused medication within one week of notification by the staff and understands that all medications must be picked up by an adult by the last day of school (medications left at school will be destroyed). Medications will be kept locked in the health office and dispensed by the school nurse or trained school designee as per the orders noted above.

By authorizing the administration of the medication, the parent(s)/guardian(s) of the above child will release and hold harmless the Thompson School District, the school nurse, or trained school designee of any claim, demand, or action associated with the administration or failure to administer the medication. In addition, I give my permission for the school nurse to contact the prescribing physician with concerns or questions regarding the medication and the related medical monitoring.

Date _____

Signature of parent/guardian _____

Parents please note:

***We must have a physician's signature to give any medication, including over-the-counter medicine; and the medication must be in the prescription or pharmaceutical container or by law we cannot administer.** These are Rules and Regulations set down by the Colorado Department of Health and the Thompson R2-J School Board Policy.

Unless your child has a chronic or extreme acute health condition, please have your child take medication at home. **Medications to be given three (3) times a day can generally be given before school, after school and at bedtime;** in the case of antibiotics, this even-spacing is preferable and ensures a more consistent blood level of antibiotic.
